                                                                                                                                                                                DISEASE: Defects in ABGGS are a cause of sitosterolemia (MIM:210250); also known as phytosterolemia or shellfish sterolemia. It is a rare autosomal recessive disorder characterized by increased intestinal absorption of all sterols including cholesterol, plant and shellfish sterols, and decreased biliary excretion of dietary sterols into bile. Sitosterolemia patients have hypercholesterolemia, very high levels of plant sterols in the plasma, and frequently develop tendon and tuberous xanthomas, accelerated atherosclerosis and premature coronary

                                                                                                          ABCG8 along a pathway regulating diatery-sterol absorption and excretion (By similarity).

SUBCELULAR LOCATION: Integral membrane protein (Probable).

TISSUE SPECIFICITY: Expressed in the intestine and, at lower level, in the liver.

INDUCTION: Upregulated by cholesterol feeding. Possibly mediated by the liver X receptor/retinoic X receptor (LXB/RXR) pathway.

SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. ABCG (WHITE)
